SUMMARY

AI/ML Engineer with hands-on experience in building and deploying scalable AI/ML systems, including LLMs, RAG, and Generative AI applications, with strong skills in Python, SQL, MLOps, backend development, and Azure-based deployment for real-world production use.

SKILLS

Programming:- Python, SQL, JavaScript, HTML/CSS, Data Structures & Algorithms, Object-Oriented Programming

Backend & Databases:- Flask/FastAPI, REST APIs, Web Services, Microservices, Database Design, PostgreSQL, Vector Databases

AI/ML:- TensorFlow, PyTorch, MLOps, Data Analytics, Retrieval-Augmented Generation (RAG), Large Language Models (LLMs), Generative AI, LangChain, Model Context Protocol (MCP), Prompt Engineering

Tools & DevOps:- Microsoft Azure, Docker, Kubernetes, CI/CD Pipelines, Linux, Agile, SDLC, Git & GitHub, n8n

WORK EXPERIENCE

AI/ML Intern

Oct 2025 - April 2026

Tech Weave Labs, Noida, India

- Built and fine-tuned Machine Learning and Deep Learning models for chatbots, disease prediction, NLP, and Computer Vision (CNNs, pre-trained models) across the full pipeline: data collection, preprocessing, feature engineering, training, and evaluation.
- Developed Python GUI applications and applied Generative AI techniques – including LLMs, RAG, Transformers, and GANs – using TensorFlow and PyTorch to build LLM-powered applications.
- Strengthened foundations in Agentic AI workflows through structured, hands-on training alongside senior engineers.

Data Analytics Intern

Jun 2025 – Aug 2025

Cetpa Infotech, Noida, India

- Automated data preprocessing, analysis, and reporting workflows using Python, SQL, and Matplotlib, cutting manual effort by 40%.
- Analyzed 100k+ row datasets with Pandas & NumPy, applying feature engineering, Exploratory Data Analysis (EDA), and visualization-based validation to reduce redundant data by 25%.
- Engineered optimized SQL queries, including complex joins and aggregations, to build robust dashboards that enhanced model evaluation accuracy by 25%.

PROJECTS

LLM Powered RAG Pipeline [Code Repository](#) | [Live](#)

Python, FastAPI, LangChain, ChromaDB, SQLite, Docker, Azure, Jina AI, RAG

- Developed a Retrieval-Augmented Generation system employing FastAPI, LangChain, ChromaDB, Jina vector embeddings and a multilingual reranker, achieving a 20% improvement in answer relevance for multilingual queries.
- Implemented a concurrent session-history store with SQLite in WAL mode; containerized with Docker and deployed on Azure.

Clinical Decision Support System [Code Repository](#) | [Live](#)

Python, Flask, Scikit-Learn, TensorFlow, PyTorch, PostgreSQL, Docker, Azure, NLP, SHAP

- Built an AI-powered healthcare platform for disease prediction, X-ray screening, and medical report analysis, training classification models on 10K+ samples to 90%+ validation accuracy.
- Integrated SHAP-based explainability, monitoring, and automated reporting; containerized using Docker and deployed on Azure.

AI-Powered Interview Platform [Code Repository](#) | [Live](#)

Python, Flask, REST APIs, OpenAI API, Web Speech API, PostgreSQL, Vercel, JavaScript, HTML/CSS

- Architected AI-driven interview platform (designed for 500+ concurrent users) with real-time scoring, sentiment analysis, and progress tracking. Also implemented secure authentication, analytics dashboards, leaderboards, transcript exports, and admin management.

EDUCATION

B.Tech in Computer Science & Engineering (Specialization AI, ML & DL) – GPA: 8.3/10

Teerthanker Mahaveer University, Moradabad

05/2026

ACHIEVEMENTS & CERTIFICATIONS

- Cleared University and National Selection Rounds for Smart India Hackathon (SIH) 2024-25; represented university at SIH twice
- Winner, National Technology Day (Software Category) - recognized for innovative project development and technical contribution
- Solved 200+ Data Structures & Algorithms problems on LeetCode using Python, C++ and SQL
- AI/ML Engineering Certification ([Coursera](#))
