SUMMARY

AI/ML Engineer with hands-on experience building and deploying production-ready systems using LLMs, RAG, AI Agents, and Generative AI. Strong in Python, PyTorch, TensorFlow, LangChain, and FastAPI with practical experience in prompt engineering, MLOps, and Azure cloud deployment.

SKILLS

Programming & Backend: Python, SQL, FastAPI, REST APIs, MySQL/PostgreSQL, Vector Databases

AI/ML: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Generative AI, AI Agents, Prompt Engineering, LangChain, Model Context Protocol (MCP), TensorFlow, PyTorch, MLOps

Tools & Cloud: Microsoft Azure, Docker, Kubernetes, CI/CD Pipelines, Git & GitHub, Agile

WORK EXPERIENCE

AI/ML Intern

Nov 2025 – Apr 2026

Tech Weave Labs, Noida, India

- Fine-tuned ML and deep learning models for chatbots, NLP tasks, and predictions. Trained CNN-based computer vision models on pre-trained backbones and hit 90%+ classification accuracy across the full pipeline from data preprocessing to evaluation.
- Built Generative AI applications using LLMs, RAG, and Transformers with TensorFlow and PyTorch, cutting model response latency by 15% through pipeline optimization.
- Developed Agentic AI workflows working closely with senior engineers, delivering 2+ internal proof-of-concept tools.

Data Analytics Intern

Jun 2025 – Aug 2025

Cetpa Infotech, Noida, India

- Automated data preprocessing, analysis, and reporting pipelines using Python, SQL, and Matplotlib, cutting manual effort by 40%.
- Processed and analyzed 100k+ row datasets using Pandas and NumPy with feature engineering and EDA, reducing redundant data by 25%.
- Wrote optimized SQL queries with complex joins and aggregations to power dashboards that improved model evaluation accuracy by 25%.

PROJECTS

LLM Powered RAG Pipeline [Code Repository](#) | [Live](#)

Python, FastAPI, LangChain, ChromaDB, SQLite, Docker, Azure, Jina AI, RAG

- Developed a Retrieval-Augmented Generation system using FastAPI, LangChain, ChromaDB, Jina vector embeddings, and a multilingual reranker, achieving a 20% improvement in answer relevance for multilingual queries.
- Implemented a concurrent session-history store with SQLite in WAL mode; containerized with Docker and deployed on Azure.

Clinical Decision Support System [Code Repository](#) | [Live](#)

Python, Flask, Scikit-Learn, TensorFlow, PyTorch, PostgreSQL, Docker, Azure, NLP, SHAP

- Built an AI-powered healthcare platform for disease prediction, X-ray screening, and medical report analysis, training classification models on 10K+ samples to 90%+ validation accuracy.
- Integrated SHAP-based explainability, automated monitoring, and reporting dashboards; containerized with Docker and deployed on Azure.

AI-Powered Interview Platform [Code Repository](#) | [Live](#)

Python, Flask, REST APIs, OpenAI API, Web Speech API, PostgreSQL, Vercel, JavaScript, HTML/CSS

- Architected AI-driven interview platform (designed for 500+ concurrent users) with real-time scoring, sentiment analysis, and progress tracking. Also implemented secure authentication, analytics dashboards, leaderboards, transcript exports, and admin management.

EDUCATION

B.Tech in Computer Science & Engineering (Specialization AI, ML & DL) – GPA: 8.3/10

Teerthanker Mahaveer University, Moradabad

05/2026

ACHIEVEMENTS & CERTIFICATIONS

- Cleared University and National Selection Rounds for Smart India Hackathon (SIH) 2024-25; represented university at SIH twice
- Winner, National Technology Day (Software Category), recognized for innovative project development and technical contribution
- Solved 200+ DSA problems on LeetCode using Python and SQL, while actively contributing to open-source projects.
- AI/ML Engineering Certification ([Coursera](#))
